CONSERVE MORE TO HAVE MORE.

As a resident of the Upstate, you've noticed that we have not received the typical amount of rainfall and are experiencing a severe drought. Long-term planning has always been a hallmark of our system. However, this prolonged drought, coupled with the fact that Duke Power, owner of Lake Keowee, has requested that the GWS reduce its water withdrawal by 25%, now requires that we expand our Conservation Awareness Program to help our customers save natural resources and money.

Weather predictions call for a continuation of dry conditions over the next six months, so we are requesting that you abide by several voluntary restrictions:

- **Reduce water use to 65 gallons per person per day**
- **Curtail aesthetic water use**
- **Restrict lawn irrigation whereby customers with even-numbered addresses (and units lettered A-M) water only on Thursdays and Sundays, and customers with odd-numbered addresses (and units lettered N-Z) on Wednesdays and Saturdays.**

By taking these simple steps we can better avoid possible mandatory restrictions in the future. To learn more easy conservation tips, please visit greenvilleh2o.com.
